

# PATRICK HENRY SCIENCE CLUB

## THE BEST LESSONS & LABS OF ALL THINGS SCIENCE!

We have assembled together some of our very best and most engaging science projects and experiments for this 8 week session. Your students will learn about chemical reactions as they make slime, explore the wonders of electricity as they build homemade flashlights and motorized fans, and discover the aerodynamics that help rockets fly to the Moon. They will also get a chance to do some engineering challenges with K'NEX and learn the physics behind balance and motion as they balance nails and pencils in some unbelievable ways. Finally, your student will get to explore the world of bugs and the lifecycle of beetles. This variety of science experiments and projects will surely fill your young scientist's mind with wonder and joy.

**For Kinder to 3rd Grade**
