

# PATRICK HENRY SCIENCE CLUB

## THE MOST AMAZING EXPERIMENTS EVER!

We have assembled together another great class of engaging and informative science projects and experiments for this 7 week session. Students will pop their tops experimenting with flying, bursting film canisters that work through the science of chemical reactions. They will investigate the phenomena of surface tension and answer the question of how can insects walk on water. Students will discover the mystery of bouncing bubbles! Bubbles that bounce like a ball without popping!

Finally, your student will explore the life cycles of everyday insects like earthworms, mealworms, and beetles. Students will even take home their very own butterfly! This variety of science experiments and projects will surely fill your young scientist's mind with wonder and joy.

**For Kinder to 4th Grade**

REGISTER AND PAY ONLINE AT:
